## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

**1. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hsu (5,133,301).**

Hsu discloses after supply of the first pressure medium, liquid and/or gas for the spraying has been interrupted, a second pressure medium, liquid and/or gas is conveyed to the nozzle, or the supply of the first pressure medium, liquid and/or gas to the nozzle is continued at a substantially lower pressure to prevent clogging of the nozzle. See column 2, lines 49-66. Further humidification of intake air is **inherent** because coal-water slurry is injected into the intake air in the combustion chamber.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**2. Claims 1 and 2 rejected under 35 U.S.C. 103(a) as being unpatentable over Hsu (US 5,133,301) in view of Hellen et al (US 6,415,745).**

Hsu discloses after supply of the first pressure medium, liquid and/or gas for the spraying has been interrupted, a second pressure medium, liquid and/or gas is conveyed to the nozzle, or the supply of the first pressure medium, liquid and/or gas to the nozzle is continued at a substantially lower pressure to prevent clogging of the nozzle. See column 2, lines 49-66.

Hsu does not disclose injecting liquid into the combustion along with inlet air to accomplished humidification of the inlet air.

Hellen et al discloses injecting liquid into the combustion along with inlet air to accomplished humidification of the inlet air. **See column 1, lines 48-50.**

It would have been obvious to one of ordinary skill in the art to utilize injecting liquid into the combustion along with inlet air to accomplished humidification of the inlet air as taught by Hellen et al **in order to** reduce nitrogen oxide emissions of Hsu engine.

***Allowable Subject Matter***

Claims 3-5,7-9,11 are allowed.

***Response to Arguments***

Applicant's arguments with respect to claims 1-5,7-9,11 have been considered but are moot in view of the new ground(s) of rejection. Applicant's argument such as "Hsu does not disclose humidification of intake air" is not considered persuasive because humidification of intake air is inherent in Hsu patent.

**Conclusion**

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
